Ingram Micro Introduces Tivoli to its Line of IBM Software Products

Tivoli Storage Management Solutions

Tivoli Storage management Solutions are the most comprehensive, enterprise wide set of storage and storage area network (SAN) management software products available in the market today. Tivoli Storage Management products provide the industry's broadest coverage, spanning the laptop to mainframe computers and supporting over 35 different vendor platforms, over 300 vendor devices, multiple applications and databases – across a variety of disk, optical and tape systems.

Top three reasons businesses buy the Tivoli Storage Management Solution

1. Offers the single, most reliable solution for data protection – from the data center to the desktop
2. Reduces total cost of ownership by standardization and centralization management
3. Eliminates disparate point products across heterogeneous environments

Tivoli NetView for Network Management

Tivoli NetView is a family of products that run across OS/390, z/OS, UNIX, Windows NT and Windows 2000.

Top three reasons businesses buy Tivoli NetView Products

1. Enables customers to seamlessly manage networks using a centralized, policy-based mode. Using SmartSets, which are collections of user-defined, dynamic groups of resources, allow management functions to be performed easily. Tivoli NetView can manage beyond the level of device availability and allows customers to develop management solutions based on business systems.
2. Allow users to filter out unwanted data and focus on important detail. The Tivoli NetView Java Web Console provides easy access to a complete range of network information from remote locations on the network.
3. Provides the best way to remotely diagnose problems and make network information easily accessible to everyone.

Tivoli Secureway

Family of security management and access control solutions, designed to help companies provide safe and secure e-business applications. Help reduce risk by lowering the total cost of computing and reducing complexity. Will fulfill the most demanding requirements for trusted e-business in today's dynamic, global enterprise.

Top 3 Reasons businesses buy Tivoli Secureway products

1. Delivery of policy-based security
2. Speeding deployment of secure e-business applications and services
3. Increase the return on security investment

Tivoli Secureway Policy Director

Provides access control management that centralizes network and application security policy. Enables fine-grained access control for Web applications and resources without any modifications to a customer's existing web based applications. Also enables organizations to authorize and secure traditional internet services.

Top 3 Reasons businesses buy Tivoli Secureway Policy Director

1. Delivers secure remote access and personalized access while adding centralized security to existing Web and TCIP/IP applications.
2. Provides a consistent, manageable access control policy
3. Supports public key Infrastructure (PKI) to provide extensible authentication and authorization.

Secureway Directory

High-performing lightweight Director Access Protocol (LDAP) offering. Key to both Secureway Directory and all IBM Middleware (WebSphere, MQ series, DB2) offerings. It is available across a wide variety of server platforms.

Top 3 Reasons businesses buy Secureway Directory

1. Offers highly scalable, multi-platform directory services integrated with IBM security and e-business solutions.
2. Provides open, standards-based products to enable support for third-party directory-enabled solutions
3. Offers a complete portfolio of integrated directory, security and services that the leading competitors cannot offer.

IBM's World Wide Volume Licensing Program: Passport Advantage

IBM's Passport Advantage is a simple, flexible way for workgroups and departments in decentralized and mid-sized organizations to acquire IBM, Lotus, and Tivoli workstation software and maintenance services in volume. Customers qualify for relationship pricing based on the volume of their purchases of software licenses and software maintenance, and they can combine the acquisitions for multiple sites within their enterprise anywhere in the world to qualify for best possible pricing. Software Maintenance ensures that customers always have the most up-to-date eligible versions of IBM, Lotus, and Tivoli workstation software, and the assistance they need to keep their business up and running.
